

Together we build the future of last mile delivery and grocery shopping. Backed by a major Swiss venture fund, MIACAR successfully launched in the region of Bern and we are now growing our company at high speed. Join us in becoming the category king in Switzerland and help us giving our customers what they really want: More time for the beautiful things in life.

## Graduate Software Engineer (f/m/d)

As a Software Engineer you will be responsible for developing state-of-the-art mobile and web applications that delight our customers.

### These will be your tasks

- Contribute to developing MIACAR's scalable, reliable, and secure grocery delivery platform (this includes web and mobile applications for our customers as well as our logistics operations)
- Take pride in working on projects to successful completion involving a wide variety of technologies and systems
- Assure quality via testing, validating data, monitoring and implementing best practices
- Deliver high quality software and user experience within an Agile development environment

### You're offering these qualifications

- Solid understanding of Computer Science concepts, algorithms and data structures
- 2+ years of experience with a modern statically typed programming language (Typescript, Haskell, C++, Java, Scala, Rust, or similar)
- Knowledge of version control techniques using git
- Interest in functional programming

### We're offering these benefits

- Be a key player in the most ambitious Swiss online food story
- Highly motivated, dynamic and international team
- Fame and glory for what you will have built
- No bulls\*\*t, down to earth, yet high caliber work environment

Sounds like you? Submit your application for MIACAR and be a "Hero of the first hour"! We are looking forward to hearing from you.
