

Internship - Nuclear Energy (3 to 6 months)

50% or more | Beznau

Would you like to gain first work experience? Then get fit for a career start with an internship. At Axpo, you can support our experts in their day-to-day business and actively participate in projects. Gain exciting insights into the diverse energy industry.

What you will do

- Work on a defined project in our Nuclear Energy Division
- Continuous support through permanent contact persons
- Get your first practical professional experience

About us

Axpo reliably produces, trades and sells energy for over three million people and thousands of companies in Switzerland. It is an international leader in energy trading and in the development of tailor-made energy solutions for its customers. The Beznau nuclear power plant is part of Axpo's power plant portfolio. It consists of two structurally identical light water reactors, each with a nominal capacity of 365 megawatts. Together, the two reactors generate approximately 6,000 gigawatt hours of electricity per year. With around 500 employees, the Beznau nuclear power plant has been producing climate-friendly electricity for over 50 years. And that makes us proud!

The Beznau nuclear power plant values diversity. We therefore welcome applicants regardless of gender, nationality, ethnic or social background, religion or ideology, disability, age, sexual orientation or identity.

What you bring & who you are

- All fields of study are possible, especially engineering, mathematics, physics and economics
- Completed minimum 2nd academic year
- High commitment, reliability and willingness to learn
- Great ideas and innovative mindset

About the team

A breath of fresh air is welcome: Axpo hires students or graduates with no practical experience and enables them to take their first step into the world of work. Together we benefit from the cooperation.
