Junior DevOps Engineer C5I (f/m/d)

Work experience	Location	Workload
Young professionals	Bern	80-100%

YOU CAN MOVE IT

— Maintain and monitor our analytics platform across hardware, network, operating systems and shared services

— Automate installation processes and streamline application delivery pipelines using scripting and infrastructure-as-code with tools such as Terraform or Ansible

— Design, implement and operate shared services including PKI, storage and authentication

— Implement monitoring tools, logging frameworks and alerting mechanisms, and respond to incidents to ensure uptime and reliability

— Collaborate with DevOps and Platform Engineering teams to integrate systems and ensure scalability and security

WHAT YOU SHOULD BRING WITH YOU

— Bachelor's degree in Computer Science, Information Technology or a related field or equivalent experience

— Solid background with Linux environments, networking and system administration

— Knowledge of container technologies such as Docker or Kubernetes combined with scripting skills in Python, Bash or Go

— Understanding of infrastructure automation and CI/CD concepts, ideally with tools such as Jenkins or GitLab CI

— Practical know-how in monitoring and logging solutions such as Prometheus, Grafana, ELK stack or Loki

— Strong problem-solving and analytical skills combined with a proactive, collaborative mindset

— Excellent English language skills are required; proficiency in German is a plus

Do you not fully meet all the requirements? Apply anyway. We are always looking for talented and motivated people to join our team. We place great emphasis on diversity and equal opportunities and aim to build a versatile team where everyone can fully utilize their personal strengths. In particular, we encourage all people, regardless of gender, who may have concerns about accepting a position in a military-related environment to apply.
